WHAT IS SMART CONTRACT

A smart contract is a **computer program** or a **transaction protocol** which is intended to automatically execute, control or document legally relevant events and actions according to the terms of a contract or an agreement.

The objectives of smart contracts are **the reduction of need** in trusted intermediators, arbitrations and enforcement costs, fraud losses, as well as the reduction of malicious and accidental exceptions. Thus, it is **immutable, scam proof, fairness, and full transparency**.

When the smart contract is **deployed and verified** on blockchain, it runs automatically and no one can ever be able to stop or shut down the system and no one can be banned from the program. It is fully decentralized and transparent.

Everyone can talk to the smart contract **directly through blockchain** without using the interface.
